Stone fruit varieties developed by the University of Florida are patent protected under U.S. Code Title 35. Anyone propagating trees for their own use or for sale is required to be licensed by Florida Foundation Seed Producers, Inc. Additionally, packers, marketers, and sellers of fruit from the above varieties can be liable for selling fruit from illegally propagated trees. As of June 24, 2014, the above entities are the only entities licensed for legal propagation and sale of trees of the respective varieties in the USA. Protect yourself from unknowingly purchasing illegal trees or fruit by asking entities if they are licensed to propagate and if fruit has come from legal trees. Illegal propagation is a direct threat to the stone fruit industry and the patent rights held by Florida Foundation Seed Producers, Inc. Royalties generated are critical to the support of the Florida stone fruit breeding program.

If you are interested in obtaining a license or would like to anonymously report illegal propagation, please contact:
