**Mangifera indica: Mango**

Edward F. Gilman and Dennis G. Watson

---

### Introduction

An abundant harvest of juicy, red-gold fruit and attractive dark green, tropical foliage make Mango a popular home landscape item in very large yards for warm climates. The trees grow to be 30 to 45 feet tall and almost 50 feet wide, so allow plenty of room for growth. New foliage is a brilliant purple-red, and flower and fruit clusters extend well beyond the long, glossy leaves. The tree is covered with very showy, white flower spikes in March and early April. Mango trees grow quickly into round, multibranched, dense, spreading shade trees but placement is limited due to the falling fruit. Some people are allergic to the pollen, the sap and even the fruit.

---

### General Information

- **Scientific name:** *Mangifera indica*
- **Pronunciation:** man-JIFF-er-uh IN-dih-kuh
- **Common name(s):** Mango
- **Family:** Anacardiaceae
- **USDA hardiness zones:** 10B through 11 (Figure 2)
- **Origin:** not native to North America
- **Invasive potential:** According to the IFAS Assessment of Non-Native Plants in Florida’s Natural Areas (IFAS Invasive Plant Working Group 2008), *Mangifera indica* should be treated with caution in the central and south zone in Florida, may be recommended but managed to prevent escape. It is not considered a problem species and may be recommended in the north zone in Florida (counties listed by zone at: http://plants.ifas.ufl.edu/assessment/pdfs/assess_counties.pdf)
- **Uses:** hedge; screen; shade; fruit
- **Availability:** not native to North America

---

### Description

- **Height:** 30 to 45 feet
- **Spread:** 30 to 40 feet
- **Crown uniformity:** symmetrical
- **Crown shape:** round
- **Crown density:** dense
- **Growth rate:** fast
- **Texture:** coarse

Place, dean for UF/IFAS Extension.
Mangifera indica: Mango

Foliage
Leaf arrangement: alternate (Figure 3)
Leaf type: simple
Leaf margin: entire, undulate
Leaf shape: lanceolate, oblong
Leaf venation: pinnate, brachidodrome
Leaf type and persistence: evergreen, broadleaf evergreen
Leaf blade length: 8 to 12 inches, 12 to 18 inches
Leaf color: green
Fall color: no color change
Fall characteristic: not showy

Flower
Flower color: white/cream/gray
Flower characteristics: showy

Fruit
Fruit shape: oval
Fruit length: 3 to 6 inches
Fruit covering: fleshy
Fruit color: green, red, yellow
Fruit characteristics: attracts squirrels/mammals; showy; fruit/leaves a litter problem

Trunk and Branches
Trunk/bark/branches: branches droop; not showy; typically one trunk; thorns
Pruning requirement: needed for strong structure
Breakage: susceptible to breakage
Current year twig color: gray, brown
Current year twig thickness: medium, thick
Wood specific gravity: unknown

Culture
Light requirement: full sun
Soil tolerances: clay; sand; loam; alkaline; acidic; well-drained
Drought tolerance: moderate
Aerosol salt tolerance: moderate

Other

Roots: not a problem
Winter interest: no
Outstanding tree: no
Ozone sensitivity: unknown
Verticillium wilt susceptibility: unknown
Pest resistance: sensitive to pests/diseases

Use and Management

Mango trees grow best in full sun on fertile, well-drained soils and should have ample moisture. Leaf, flower, twig and fruit litter is a constant nuisance for some, and branches are subject to breakage during severe windstorms. It seems like something is always falling from a Mango tree to litter the lawn. Place it in a bed with other plants to hide the litter.

There are several cultivars available which have been selected for fruit quality: `Keitt', `Hent', `Edward', `Glenn', `Haden' and others are best for Florida; `Alolia', `Edgehill', `Haden', `Manila' and others are recommended for California.

Propagation is by budding or veneer grafting on seedling rootstocks.

Pests

Scales followed by sooty mold and Mediterranean fruit fly are pests of this tree.

Diseases

Anthracnose on fruit and leaves is a serious problem for Mango.
